STAINLESS STEEL MESH SYSTEM

FEATURES AND BENEFITS PRODUCT OF SECUREVIEW

1. 3M VHB Acrylic Bonding

All our security screens are free from mechanical fixings such as old-fashioned screws and rivets. Instead they employ VHB high performance chemical bonding technology to create effortless strength. The acrylic chemistry of the VHB adhesive delivers exceptional durability while its viscoelasticity provides superior energy absorbing properties which helps to eliminate stress points.

2. SLEEK Aluminium Frame

Our extruded aluminium frame system is crafted to deliver a lightweight solution without compromising on strength. The frame features gold accredited Interpon powder coating that delivers a durable finish in a versatile range of colours including the latest Colorbond colours.

Solid aluminium stakes are used to fortify each corner join to provide steadfast strength.

3. Innovative Keyway Fixing System

Our unique two-part wedge system has been designed to create the precise pressure required to activate the VHB adhesive to its full potential. This VHB chemical bonding is proven to have the strength to replace rivets.

Both wedges are made from UV stabilised PVC to yield superior durability over time. Unlike screw-clamp or riveted systems, all our screens use innovative technology that provides clear spacing between the security screen infill and aluminium frame. This eliminates the opportunity for galvanic corrosion, which occurs when dissimilar metals contact.
